For more detailed country-by-country information read „Africa on Shortwave“ by Tony Rogers, BDXC – www.bdx.org.uk

Introduction: What is this and Why all this?

This is a list of short wave broadcasting stations from Subsaharan Africa for listeners worldwide. This is not a complete list of all somewhat african short wave stations and is not intended to be one, as it omits intentionally (almost all) stations from north of the Sahara, from South Africa and Swaziland, those broadcasting to Africa from somewhere else in the world, and African relays of external services from anywhere else.

Why that? Mainly because their schedules are in general easy to find out somewhere else in the web (the stations homepages or Africa on Shortwave, see above). Also they are relatively easy to listen to. I'm much more interested into the others which are more difficult to monitor: Many of them do not publish schedules, many even do not have a webpage, or it's outdated. Most stations from Subsaharan Africa also can't be heard via live stream or satellite, but only via SW. Often, frequencies are changed without announcement, stations disappear and sometimes reappear, or new stations appear out of the informational nothing. Within the DXing community, reliable and up-to-date information on these stations is sometimes hard to find, and there are quite a number of errors in the loglists. On the other hand, some listeners wonder what they might have heard on this or that frequency, or if and where they may find a certain station. So I try to collect, weight, condense and comment all this information with the aim to have an up-to-date, accurate and comprehensive reference, free to use but with no warranty.

On the one hand, this list should give the actual (activity) status of the stations and frequencies, on the other hand it is an archive of somewhat „outdated“ information also, like at least a small selection of frequencies used in the past. I cannot keep a complete "backlist" of inactive stations and frequencies, but I try to refer at least to those I have some hope that they may be back on air sooner or later. To keep the list compact and easy to administer, I do not collect addresses and URL, QSL policy and similar information, you will find much of this in WRTH; Sender und Frequenzen or BDXC page.

Not any detail, however, will 100% correct and up-to-date. That's simply impossible. But if I do have serious doubts, you will find a remark on that. The same applies if I give information that it somewhat tentative, as this is better than no information.

Part 1: Stations by Frequency

Key to Frequency list

column C Official Status or Background of the Station

- nothing government or public station
- I independent / commercial / non-governmental station
- P station of political party
- R religious / missionary station
- S separatist / rebel station
- U United Nations and/or Fondation Hirondelle

column D Current Activity status based on observations in the past few months

- a active or most likely active more or less regularly
- u current status unconfirmed, not heard in recent months
- x used irregularly for tests or alternatively to other frequencies
- j likely used for jamming purposes or to escape jamming only
- s only sporadic reports, probably very irregular operation
- i most likely inactive
- f future plans

column E power in kW if stated somewhere

column F logged in 200x, X stands for 2010

reception in Europe:

- ++ regularly, generally in good quality
- + quite regularly, easy to listen to
- o now and then, not so easy
- rarely reported, difficult to listen to
- very unlikely to catch it

ratings generally follow my own listening experience (except early mornings), usually outside reception with portable Sony receiver, so this is in fact possible without an expensive semi-professional receiver.

	For several years all stations in Cameroon seemed to be inactive on SW, 2008 R. Buéa was heard again by nigerian listeners. Other Cameroon freqs. heard until 2000/2001: 4850 Yaounde, 5009 Garoua. It was reported some years ago that the government planned to invest in a new transmitter in Yaoundé, but not into regional SW. The SW transmitter in Garoua has definitely a severe fault and will not be repaired. Probably the Buéa transmitter is very old and used with much lower power than previous nominal (8kW/4kW).

Eritrea						
	Many Eritrean opposition or clandestine programmes aired via Jülich, Samara etc., schedules are quite variable. Due to jamming operations by Ethiopia, ERI txers may change frequencies, especially in the afternoons. Likely VoBME operates three txers and Bana Radio operates an additional, so it's four altogether, but not all seem to be used regularly. Channel 1 operates in Tigrigna and others, Channel 2 in Arabic, Amharic and others.

Ethiopia						
Many Ethiopia opposition or clandestine programmes aired via Jülich, Samara etc., schedules are quite variable, ETH uses jamming against these and many other transmissions such as Eritrea, VOA and Deutsche Welle. Possibly both ANU and RTG are aired via the Moyabi site, majority owner is now the Libyan Government, station may also be used for jamming against Libyan Opposition broadcasts, but currently unreported. RTG off since July 2008, 19/16mB since november 2008, leaving only one transmitter on air. It was reported that the staff tries to repair a 2nd transmitter, but this probably didn't succeed so far. When occasionally 15475 was heard it was alternating to regular 9580, not parallel.
